Chisom Udonsi

Fullstack Engineer

udonsichisom02@gmail.com • LinkedIn • Portfolio • GitHub

SKILLS

- **Frontend:** React, Vue, Next.js, Nuxt.js, TS, Tanstack Start
- **State Management:** Redux, Zustand, Jotai, MobX, RTK
- **Routing:** React Router, Tanstack Router
- **Styling:** Sass, Styled Components, TailwindCSS
- **UI Libraries:** Mantine, Chakra UI, Material UI, Shadcn UI
- **Form Handling:** React Hook Form, Formik
- **Schema Validation:** Yup, Zod, Joi
- **Mobile:** React Native, Expo
- **Data Fetching:** Apollo Client, Tanstack Query, SWR
- **Backend:** Node, Express, TS, NestJS
- **Databases:** MongoDB, SQL, PostgreSQL
- **Emails:** Resend, Seamailer, SendGrid, MailChimp, Brevo
- **Testing:** React Testing Library, Jest, Vitest, Cypress
- **Version Control:** Git, GitHub
- **BaaS:** Appwrite, Supabase, Firebase
- **Project Management:** Jira, Slack, Azure Boards, MS Teams

PROFESSIONAL EXPERIENCE

Seamailer, Fullstack Engineer, September 2024 – Present **(Full-time)** **Remote, Nigeria**

- Started as a frontend engineer and was promoted to a fullstack engineer for the impact of delivered work, now a core engineer on the product, serving 1,000+ active users.
- Review every feature, enhancement, and fix that ships to the platform, while implementing backend API logic (NestJS, Sequelize) for complex business requirements.
- Build and maintain high-performance Vue.js/Nuxt UIs, including a no-code drag-and-drop campaign editor used across the platform's entire customer base.
- Contribute to sustaining 99% email deliverability by optimizing sending pipelines.
- Implemented audience segmentation and marketing automation workflows that power lead-nurturing journeys for campaign customers.
- Collaborate with backend engineers on payment integration and background job processing for high-volume email dispatch.

Assist Factory, Frontend Engineer, November 2024 – Present **(Part-time)** **Remote, United States**

- Brought on as the core frontend engineer to build this platform from the ground up, architected the UI end-to-end for a polished, professional product from day one.
- Designed and shipped the request system that now powers task management for every client-assistant engagement on the platform.
- Built real-time messaging plus Google Calendar-based scheduling, giving clients and virtual assistants a single flow from first contact to booked session.
- Built a VA ranking system based on actual completed work, surfacing top performers and raising service quality platform-wide.

SBSC, Senior Frontend Engineer, February 2026 – Present **(Contract)** **Hybrid, Lagos**

- Engaged as a senior frontend engineer delivering across multiple client projects within SBSC's portfolio simultaneously.
- Operating at senior level on a contract basis; specific projects and deliverables confidential under NDA.

Umuigbo Diaspora, Fullstack Engineer (Sole Engineer), June 2026 – July 2026 **(Contract)** **Remote, Germany**

- Brought on as the sole engineer to architect and build the platform from scratch, owned architecture, frontend, backend, and deployment end-to-end within a fixed contract timeline.
- Shipped 13 major feature modules solo, including community directories, event RSVPs, mentorship matching, and group travel coordination.

- Integrated Stripe for payments and Brevo for automated email notifications across the platform.
- Delivered on a full modern stack, Tanstack Start, NestJS, PostgreSQL, Prisma, without a supporting team.

YPMC, Fullstack Engineer (Frontend-heavy), May 2025 – July 2025 **(Contract)** **Hybrid, Lagos**

- Joined on a 3-month contract to resolve data-consistency issues and improve UX on a live logistics platform.
- Raised Lighthouse scores from 30% to 62% (performance), 45% to 77% (accessibility), 72% to 96% (best practices), and 90% to 100% (SEO) through code-splitting, lazy-loading, and state-level optimizations.
- Built responsive interfaces from Figma using React, Next.js, and TailwindCSS, and integrated real-time order tracking via WebSockets.
- Contributed to the platform gaining 10+ new paying users during the engagement.

Alajo, Frontend Engineer, April 2025 – November 2025 **(Contract)** **Hybrid, Lagos**

- Rebuilt the landing pages, then moved into building new customer-facing features for a savings platform reaching millions of low-income earners.
- Shipped 5 role-based dashboards (Customer, Field Agent, Marketer, Entrepreneur, Admin), each tailored to a distinct user journey.
- Built finance and banking tools plus third-party partner integrations spanning loans, airtime, data, and insurance.
- Helped extend financial inclusion to users without smartphones or internet access, using Vue.js, TailwindCSS, and Pinia.

EDUCATION

Federal University of Technology Owerri, 2019 - 2025 **Imo, Nigeria**

Bachelor of Technology in Computer Science (First Class Honours)

PROJECTS

- **Seamailer:** Core engineer on this email marketing platform serving 1,000+ active users, built the drag-and-drop campaign editor, audience segmentation, and marketing automation tools that power the platform's lead-nurturing journeys, while sustaining 99% email deliverability. Link to project
- **Umuigbo Diaspora:** Sole engineer who architected and built this Igbo diaspora community platform from scratch, owned architecture, frontend, backend, and deployment solo, shipping 13 feature modules including community directories, event RSVPs, mentorship matching, and Stripe-powered payments, on Tanstack Start, NestJS, PostgreSQL, and Prisma. Link to project
- **YPMC:** Joined this logistics platform on a 3-month contract and raised Lighthouse scores from 30% to 62% (performance), 45% to 77% (accessibility), 72% to 96% (best practices), and 90% to 100% (SEO), while building responsive interfaces from Figma and integrating real-time rider tracking via WebSockets, contributing to 10+ new paying users.
